Screens for Professionals

Ascender Electrol

Have your presentations ever been so uplifting?

Traditional, baroque or extreme design? The new Ascender Electrol electrically operated projection screen by Projecta fits into any type of surroundings. It remains discreetly absent if necessary, but is always ready to surprise the audience with a presentation. Its advanced design allows for the screen to be integrated seamlessly with a floor or decorative setting, so that it becomes an invisible part of the surroundings. This ensures that every sublime detail of the projection room is preserved. And that is precisely how an unsurpassed experience is made of each presentation or home cinema viewing, time and again. This is an achievement which makes this top-class screen one of the very best on the market.

Unique features, uncompromising quality…

- **High-tech mechanism**

The screen folds and unfolds silently in a single flowing movement. This is made possible by an advanced motorized tensioning arm which is located behind the projection screen fabric. An inbuilt safety device prevents the screen from being raised if the trap door is blocked.

- **Silent operation**

The Ascender Electrol rises quickly and silently from floor level. It disappears again just as silently, stored away out of sight behind an electrically operated panel.

- **Sublime image reproduction quality**

The exceptionally durable case houses top-quality Matte White S projection screen fabric with black backing and an all-round matte black border.

The Ascender Electrol is available in video (4:3) and HDTV (16:9) formats in widths of up to four metres. The projection screen fabric is totally seamless for all standard sizes.
